

---

**CLIENT:** Software Development for risk/catastrophy modelling

---

**SECTOR:** Technology/Software

---

**CONTRACT VALUE:** £1.1M

---

**DATA CENTRES:** London

---

**SERVICE TYPE:** Data Centre Storage

---

**PROJECT INFORMATION:**

Specialising in software development that models risk and potential catastrophies for the insurance industry our client was looking for a powerful and efficient solution for managing data and meeting with the demands of their business.

This required a great deal more computer capacity than was currently on site, and although a cloud-based solution was explored, the most cost effective route was to install on site hardware and storage to cope with the requirements needed.

7Tech carried out a full service providing advice on the type of installation and OEM brand to be utilised, and full installation of the new storage racks and drives at the chosen UK based location.
